

iTRAKKA - RFID tracking solutions!

The company which specializes in RFID tracking and hydraulic hose management.

iTRAKKA simplifies hose management and data collection right from the service technician in the field through to the upper management's extensive reporting options.

Combining iTRAKKA's range of pressure test rigs and our state of the art tracking system we can offer a complete hose management package for your business. The iTRAKKA system also ensures your company exceeds the tagging and testing requirements needed for MDG41.

Using an intrinsically safe, rugged PDA the service technician can perform a number of scheduled tasks from Inspecting hoses, fitting new hoses and making new hose assemblies. It can also be used to perform an urgent repair or breakdown, or verify and capture information from hoses not in their schedule tasks. Once the chosen tasks have been performed for that day, that information is then uploaded to the iTRAKKA web site which automatically updates the system.
